

Our Lab studies the effect of cannabis on the immune system and particularly neutrophil NETosis. We are now recruiting PhD students for an interdisciplinary research, aiming to characterize, define and reveal biochemical mechanisms underlining neutrophils and immune cells physiology in human diseases. The research will combine translational medicine with cutting-edge cellular assays with clinical work with human donors and patients.

Cannabis and Oncology Lab
Prof. Bar Sela Gil

The work is conducted in HaEmek Medical Center, Afula Hospital
Technion Faculty of Medicine
